
The WinMend Password Retriever is a free application for retrieving lost passwords on Windows computers. The WinMend Password Retriever is able to retrieve forgotten passwords for Internet Explorer, Microsoft Outlook, Microsoft Office Word, PowerPoint, Excel and Windows NT4.0. *Please note that the WinMend Password Retriever is not compatible with Windows 95/98/ME versions.* Microsoft has stopped supporting some versions of their operating system so they are unable to update some parts of their products including the password retrieval system which makes it impossible for us to support these systems as well. This means that if you are using one of these unsupported systems then this tool will not be able to recover your password. On December 1, 2008, Microsoft announced that they are no longer supporting password retrieval of Microsoft Office XP, Office 2003, Outlook 2002/2003/2007 and Windows NT4.0. This means that these products will no longer support the password retrieval feature. If you are using one of these systems then this tool will not be able to retrieve your passwords. You must change your password for new ones to work with WinMend Password Retriever for these products. For example: WinMend Password Retriever v2.1 does not support the following operating systems: Windows NT4.0, Windows 2000 Service Pack 3 or earlier, Windows XP Service Pack 1 or 2 . The latest and greatest version of this tool is WinMend Password Retriever v3.1. This tool has added support for Windows 8, Windows 8.1 and Windows 10 as well as Microsoft Edge and Internet Explorer 11. It also now works with Office 2013/2016/2019, Outlook 2013/2016/2019 and Word 2007/2010. As of July 29, 2018, the latest version of WinMend Password Retriever is v4.11 according to the release notes on our website: <http://www.winmendsoftware.com> . The developers of WinMend Password Retriever have provided free password retrieval tools for over a decade. This tool is used to retrieve passwords that you have already forgotten because you can't remember them or because they no longer work. It is able to retrieve passwords that include symbols and letters, unlike many other hacking tools. Since September 1, 2016, WinMend Password Retriever has been downloaded over 11 million times from CNET and Google alone. This is a significant figure considering this tool is provided free of charge and the WinMend website does not encourage users to download it from their site. The first version of this tool was released on January 26, 2003 and was named WinMend Internet Explorer Password Recovery and it retrieved passwords for Windows 98/Me/NT4.0/2000/XP. Recent versions have added support for Windows 8, Windows 8.1 and Windows 10 as well as Microsoft Edge and Internet Explorer 11. On August 19, 2007, the developers of this tool released the first version of the WinMend Outlook Password Recovery Tool. This tool retrieves passwords stored in Microsoft Outlook 2003, Outlook 2007 and Outlook 2010 including the following types:

On June 1, 2012, version 2.
